

Stylist Style Generator

Create and change multi-level paragraph numbering and heading styles automatically

Data Sheet

- Automatically generates / edits up to 9 levels of paragraph numbering styles
- Saves time and effort – 1 dialog box for **all** levels replaces 5 dialogs for **each** level
- Reliable paragraph numbering that won't get corrupted or disconnected
- Define multi-level heading styles without numbering
- Redefines existing styles as well as creates new ones
- Includes settings for all the most used formatting options for each level

Automatically generates up to nine levels of numbering or heading styles

Stylist Style Generator makes it easy to create and define paragraph styles, including multi-level heading and paragraph numbering style sets. It gives you quick access to numbering formats, restart levels, indents, spacing, fonts, follow-on styles and more. You can add and remove levels and numbering from your styles whenever you want.

Stylist Style Generator creates reliable paragraph numbering styles that don't get disconnected or corrupted.

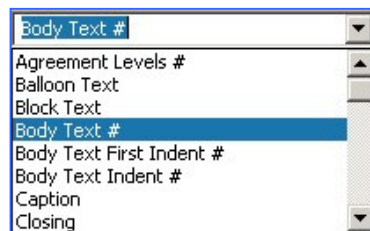

Efficient and easy to use

Stylist Style Generator saves time and effort: one easy to use dialog box lets you define formatting and numbering settings for all related style levels.

Using Word's built-in style and numbering features, you need to define a style for each level separately, working through as many as 4 dialog boxes for up to 9 levels; then you have to define your numbering separately.

Stylist Style Generator's single dialog box lets you change your mind and redefine styles and numbering at one go without having to drill down through layers of dialog boxes for each style level.

In addition to creating and editing new sets of styles, Stylist Style Generator works with your existing styles. If you choose an existing style, Stylist Style Generator loads each style's settings so you can redefine them. You can even add and delete levels in existing multi-level style sets with a couple of mouse clicks.

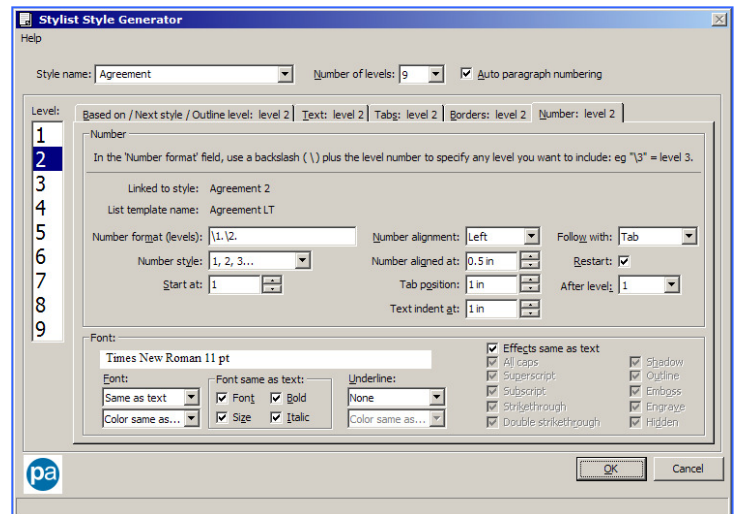

Simply select or type a style name, specify how many levels you want, and set the formatting and numbering options for each level, all from one dialog box. Stylist Style Generator automatically creates a style for each level with your formatting and numbering settings. It also links each numbering level to the appropriate style.

Reliable paragraph numbering

Automatic paragraph numbering in Word relies on "list templates": behind-the-scenes numbering formats that are attached to your paragraph styles. By default, Word creates a new numbering list template in each document every time you change numbering using the Outline Numbering gallery, resulting in a variety of numbering lists that may look alike but are not the same. If you choose the wrong one your document numbering can become disconnected and restart randomly, or you can lose your numbering altogether.

Style Generator makes Word's numbering more reliable. Because Style Generator creates named links between numbering levels and their styles, paragraph numbering created using Style Generator won't break or become corrupted.

Stylist Style Generator : Data Sheet

Stylist Style Generator is easier to use and more reliable than Word's built-in style editing and Bullets and Numbering features. Stylist Style Generator complements Word's built-in features so that you can edit your styles and redefine your numbering using either Stylist Style Generator or Word's built-in features – when you select a numbering list created by Stylist Style Generator from Word's Bullets and Numbering gallery, the gallery will bring up the list that is linked to the styles you chose. You know that your numbering will stay in sequence without having to try to find the right numbering from several look-alikes in the gallery.

Style name: Number of levels: Auto paragraph numbering

Features:

- Creates and modifies from 1 to 9 levels of any paragraph style – generates multiple level heading styles with or without paragraph numbering
- Redefines existing styles and creates new ones automatically
- Links paragraph numbering styles to named list templates, so paragraph numbering stays consistent and reliable
- Defines numbering, indents, restart levels, and appearance for every numbering level
- Combines the most used features from five different dialog boxes in one

Linked to style: MyStyle 1
List template name: MyStyle LT

Based on / Next style / Outline level: level 2 | Text: level 2 | Tabs: level 2 | Borders: level 2 | Number: level 2

- Sets style indents, appearance, before and after spacing, line spacing, follow-on styles and more
- Reads numbering settings from any numbering style created by Stylist Style Generator
- Changes active document only
- Automatically detects user's preferred measurement units (inches, centimeters, millimeters, picas or points)
